Hospital at Home: Use of Patient List for Command Center

Introduction
This document will help command centers understand how to track patient’s in their Emergency Departments (EDs) using one patient list for patients enrolled in Hospital at Hospital services. The Command Centers were looking for a way to track patients in their ED’s using just one list. If you need further assistance on how to set up patient lists you can access Create a Custom Patient List job aid here.

Patient Lists

Step 1  A Patient List can be setup to review all Command Center (CC) patients.

Step 2  A Patient List may also be used to setup an ED sites specific list that the Command Center is monitoring. The Patient List columns may need to be customized to show Nurse Unit so that the user can see the patient location.
