Sepsis Alert and Documentation in IView:
Sepsis Alert displays if patient meets the criteria. The alert looks in to Lactic Acid Results, SBP, and Creatinine and Bilirubin results.

☐ Follow the instructions on the Alert. Close the alert the same as you would a MEWS alert.

☐ When the Sepsis Alert Appears, the nurse has to assess the patient and notify the MD. Documentation for Sepsis/MEWS actions are done in IView – Frequent Monitoring - Sepsis and MEWS Alerts.
